COMSOL  
Solution

Analytical  
Verification

Discussion

Experimental  
Validation

Summary

- spherical particles
- fluid (air) incompressible, ideal gas behavior, turbulent flow
- fully developed velocity profile
- isothermal flow
- buoyancy neglected
- convective and diffusive terms neglected
- free slip electrode

Summary

$$\nabla \cdot \mathbf{E} = \frac{\rho_{el}}{\epsilon_0} \quad (1)$$

$$\mathbf{E} = -\nabla\phi \quad (2)$$

$$\nabla \cdot \mathbf{J} = 0 \quad (3)$$

$$\mathbf{J} = \rho_{el}(\cancel{w} + b\mathbf{E}) - \cancel{D\nabla\rho_{el}} \quad (4)$$

$$\nabla^2\phi = -\frac{\rho_{el}}{\epsilon_0} \quad (5)$$

$$\mathbf{E}\nabla\rho_{el} = -\frac{\rho_{el}^2}{\epsilon_0} \quad (6)$$

Discussion

Experimental  
Validation

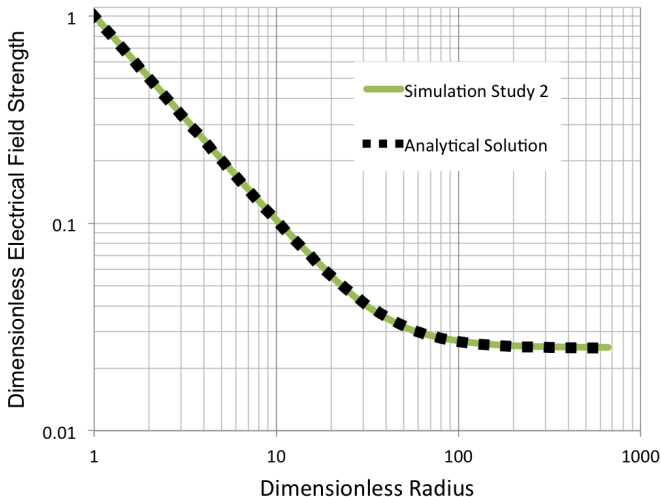

Summary

# Analytical Verification

## Electric Field Strength along the radius

# Analytical Verification

## Space Charge Density along the radius

## Flow Simulation

- no slip - BC on emitting electrode

## COMSOL Setup

- iteration scheme - computation time efficient and robust
- automation of the iterative procedure - fully coupled approach (solver-tuning)
- include diffusion and convection in the physical model

## Analytical Verification

- physical model is *mathematically* correct
- experimental validation is delicate

# Experimental Validation

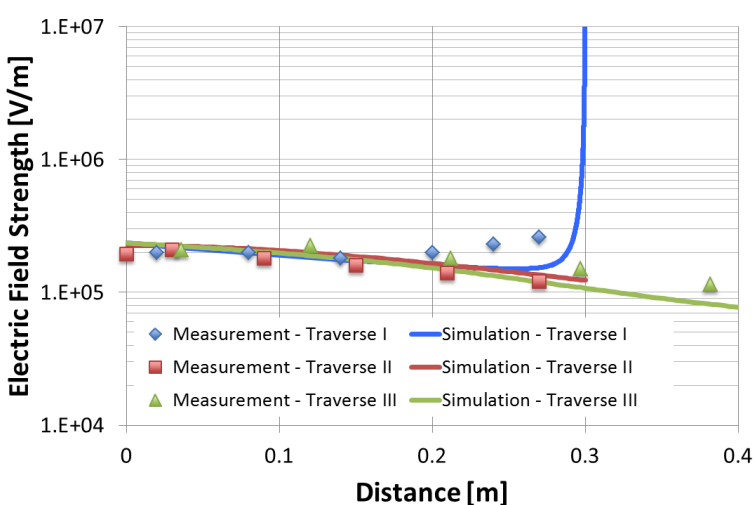

Adaptation to other geometries

## Setup

Source: Poppner, Marc et al. (2005): Electric Fields coupled with ion space charge. Part 1 + 2. Journal of Electrostatics. Volume 63. S.775-787. Amsterdam: Elsevier.

# Experimental Validation

## Completed Points

- Simulation of an entire ESP including
  - Flow Simulation
  - Electrostatics + Charge Conservation
  - Particle Charging Processes
  - Particle Motion + Deposition Efficiency

## Conclusions

- Customizable code needed (user-defined PDEs)
- Concept numerically robust and practical
- Analytical verification appropriate
- Experimental validation quite delicate
